

PyTorch Tutorial

01. Overview

Goal of this tutorial

- How to implement learning system using **PyTorch**
- Understand the basic of neural networks / deep learning

- Requirements

- Algebra + Probability
- Python

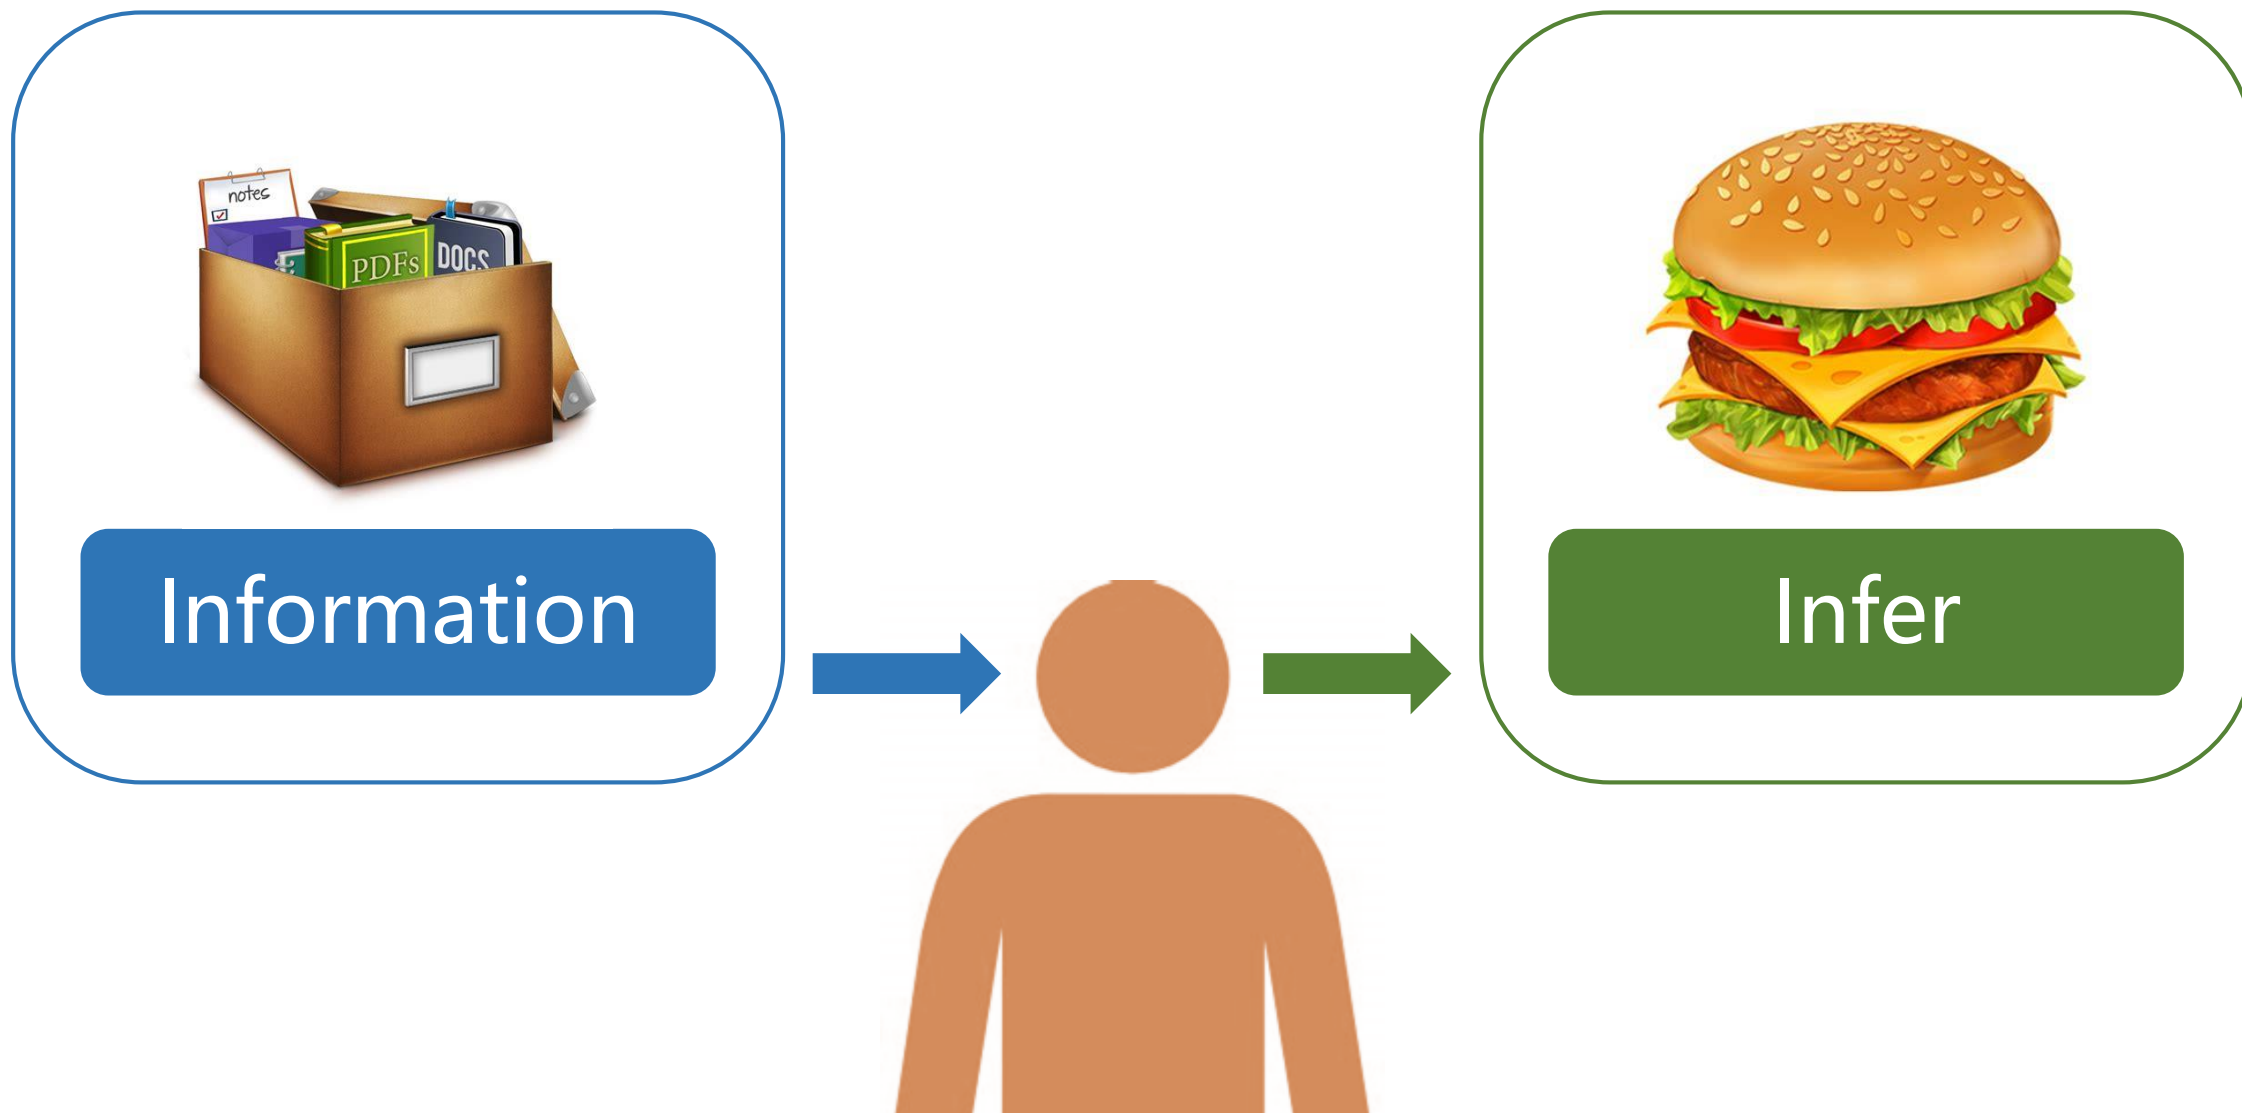

Gao F, Huang T, Wang J, et al. Dual-Branch Deep Convolution Neural Network for Polarimetric SAR Image Classification[J]. Applied Sciences, 2017, 7(5):447.

How to develop learning system?

Rule-based system VS Representation learning

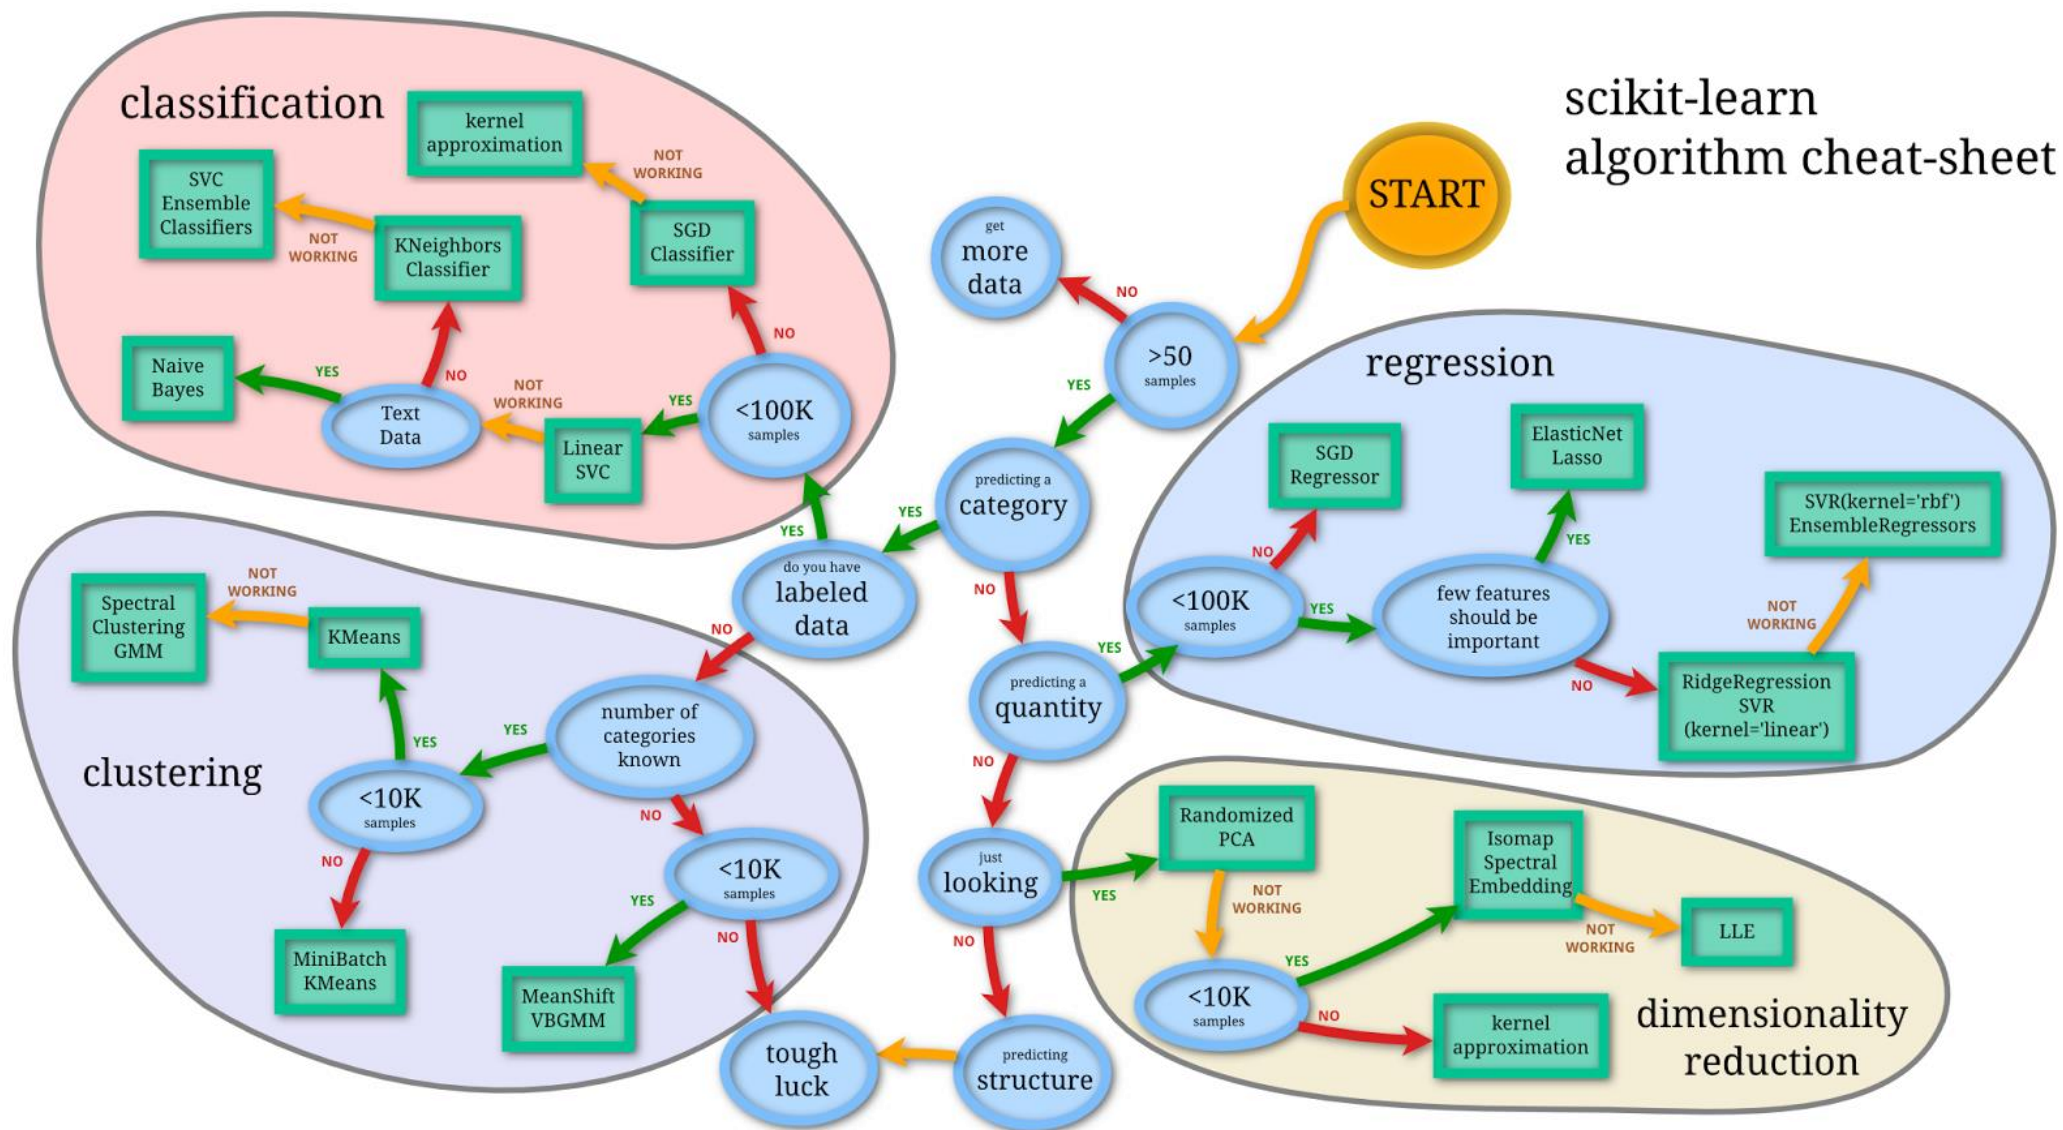

Rule-based system

Training from data

Traditional machine learning strategy

New challenge

- Limit of hand-designed feature.
- SVM can not handle big data set well.
- More and more application need to handle unstructured data.

Computation

Good news

- **Deep learning is not too difficult**
 - Basic algebra + probability + python
 - Less than one year study
- **There are lots of deep learning framework**
 - Starting from scratch do not be required
 - Enabled efficient and convenient use of GPU
 - Lots of components of neural networks provided by framework
- **Popular deep learning frameworks**
 - Theano (University of Montreal) / TensorFlow (Google)
 - Caffe (UC Berkeley) / Caffe 2 (Facebook)
 - Torch (NYU & Facebook) / **PyTorch** (Facebook)

What is PyTorch

- PyTorch is a python package that provides two high-level features:
 - Tensor computation (like numpy) with strong GPU acceleration
 - Deep Neural Networks built on a tape-based autograd system

Why PyTorch

- Dynamical graph
 - More flexible
 - Easy to debug
 - Intuitive and cleaner code
- More neural networkic
 - Write code as network works
 - AutoGrad for forward / backward

A graph is created on the fly

```
x = torch.randn(1, 10)
prev_h = torch.randn(1, 20)
W_h = torch.randn(20, 20)
W_x = torch.randn(20, 10)
```

Install PyTorch

Get Started.

Select your preferences, then run the PyTorch install command.

Please ensure that you are on the latest pip and numpy packages.

Anaconda is our recommended package manager

OS	Linux	MacOS	Windows	
Package Manager	conda	pip	Source	
Python	2.7	3.5	3.6	
CUDA	8	9.0	9.1	None

Run this command:

```
conda install pytorch cuda90 -c pytorch
pip3 install torchvision
```

[Click here for previous versions of PyTorch](#)

<https://pytorch.org>

After install PyTorch on your computer

```
PS C:\Users\liuii> python
```

```
Python 3.6.5 |Anaconda, Inc.| (default, Mar 29 2018, 13:32:41) [MSC v.1900 64 bit (AMD64)] on win32
```

```
Type "help", "copyright", "credits" or "license" for more information.
```

```
>>> import torch
```

```
>>> print(torch.__version__)
```

```
0.4.0
```

```
>>> # Perfect!
```
