## Array.length

You can find the **length** of an array by using its **length** property.

```
var donuts = ["glazed", "powdered", "sprinkled"];  
console.log(donuts.length);
```

### Prints: 3

To access the **length** property, type the name of the array, followed by a period **.** (you'll also use the period to access other properties and methods), and the word **length**. The **length** property will then return the **number of elements** in the array.

**TIP:** Strings have a **length** property too! You can use it to get the length of any string. For example, **"supercalifragilisticexpialidocious".length** returns **34**.

### QUIZ QUESTION

What is the length of the following **inventory** array?

```
var inventory = [  
  ["gold pieces", 25],  
  ["belt", 4],  
  ["ring", 1],  
  ["shoes", 2]  
];
```

☐ 1

☒ 4

☐ 8

☐ 32
