

# Open data portals as part of the open data ecosystem: lessons learned from geoportal research

Bastiaan van Loenen (b.vanloenen@tudelft.nl)

Joep Crompvoets, KU Leuven, Belgium

Alenka Poplin, Iowa State University, United States

# Overview

- Spatial data ecosystem
- Access network: geoportals
- Comparing geoportals and web search performance (2010 research)
- Comparing geoportals and open data portal performance (2016 research)
- Reflection
- Testing two portals of the EU

# Spatial data ecosystem (formerly known as spatial data infrastructure)

- network-based solutions which enable easy, consistent and effective access to geo-information and services offered by public agencies and others

(Rajabifard and Williamson, 2002)

# Spatial data ecosystem objective

- To enable users to save resources, time and effort when trying to acquire (new) data sets

(Rajabifard and Williamson, 2002)

# Save resources, time and effort: user perspective

Backx 2003

# Access network

- Geoportal:
  - one-stop shop for geoinformation (Crompvoets et al., 2004).

# Access network

- Geoportal:
  - one-stop shop for geoinformation (Crompvoets et al., 2004).
  - **significant cost reductions** related to searching, assessing and accessing geo-information can be achieved (see Askew et al., 2005; Beaumont et al., 2005).
- Empirical evidence lacking

# Assessing geoportals

- Geoportal (focus on supply):
  - one-stop shop for geoinformation (Crompvoets et al., 2004).
- Web (focus on use):
  - “illusion of an easy access” (Bates et al., 2002)
- Which one serves the user best?

# Experiment: geoportal assessment

MSc students were assigned four tasks:

1. literature study on both (geo)portal theory and transaction cost theory: geoportal criteria
2. apply criteria to assess two portals of their choice
3. assess geoportals/ web from a transaction cost perspective (cost of time spent on finding, assessing, accessing, and acquiring geoinformation)
  1. Framework dataset at two sides of an administrative border
  2. For university assignment
4. discussion and experiences were reflected upon.

**Goal: to experience the process of finding data, inquiring and acquisition**

# Assessing geoportals

Scenario	Number of students
<b>Scenario 1</b> The students received information about the geoportal through which they should start searching for geoinformation	6 students
<b>Scenario 2</b> The students not received any instructions where to search for geoinformation	7 students

# Assessing geoportals

	<b>Geoportal</b>	<b>Web</b>
Succeeded		
Average time (minutes)		
Failed		
Average time (minutes)		

# Assessing geoportals

	<b>Geoportal</b>	<b>Web</b>
Succeeded		4 (out of 14)
Average time (minutes)		158
Failed		10 (out of 14)
Average time (minutes)		70

# Assessing geoportals

	<b>Geoportal</b>	<b>Web</b>
Succeeded	9 (out of 12)	4 (out of 14)
Average time (minutes)	253	158
Failed	3 (out of 12)	10 (out of 14)
Average time (minutes)	165	70

# Characteristics experienced

	<b>Geoportal</b>	<b>Web</b>
validation data	yes	no
validation metadata	yes	no
structured provision of data	yes	no
support helpdesk	sometimes	no
sample data	sometimes	sometimes
data availability	some data only available through portal	some data only available through web

# Experiences in 2010

- Where is the data? only metadata
- Contact portal manager failed: broken links/ mail addresses
- Language
- No direct access: registration process
- Payment required
- Limited use: no commercial use
- User friendliness: where should I go?
- Technical

# Recommendations

- Fix the links
- Add at least sample data to test the data
- More coherency and compliancy of geoportals worldwide
- Perform user assessments to make the portal as user friendly as possible
- Make the portal known to the world: make sure it shows in the first ten hits in a general search engine

# 2016: how are the portals doing?

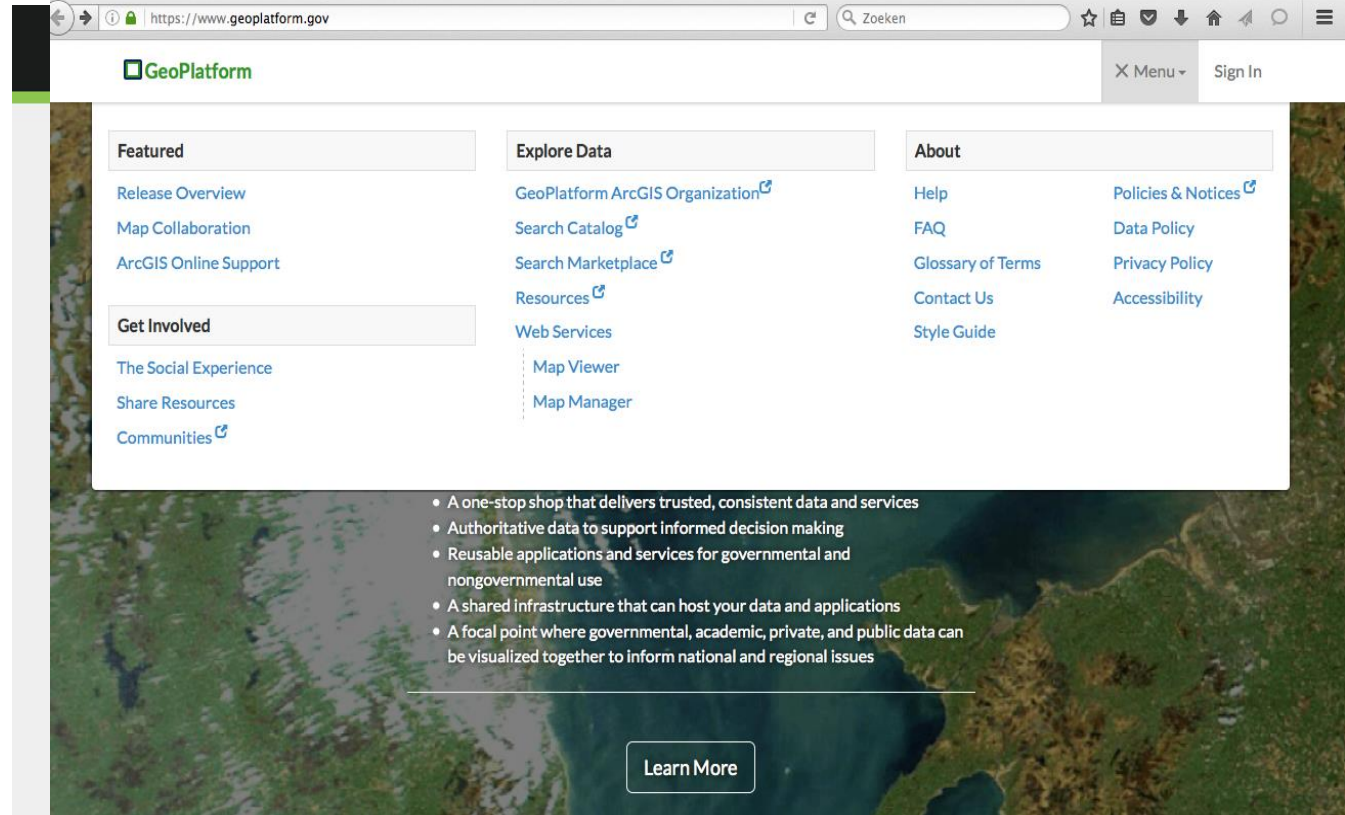

- Assessing geoportal and open data portals

# 14 students investigated

- 12 geoportals
- 13 open data portals
- 25 Key Performance Indicators developed

# Geoportal development

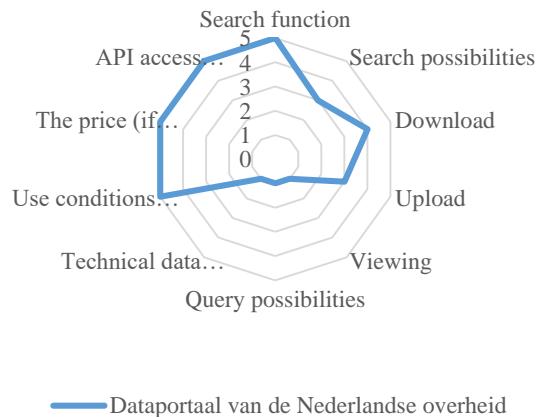

- No portal
- Project
- Product portal
- Clearinghouse
- Platform

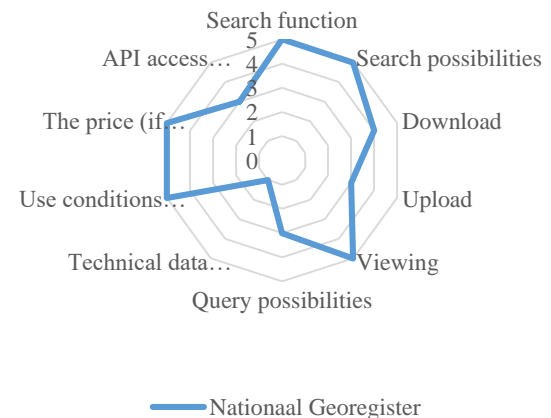

See: <http://www.sdiassessment.org/>

# Comparing geoportal and open data portal (case NL)

**Functionality (25%)**

**Functionality (25%)**

# Main overall findings (2016)

## Open data portal

Scores well on:

- Q14 services (12/12)
- Contact possible (11/12)
- Moving between pages (12/12)
- User friendly search function (11/12)
- *Download for all data* (10/12)
- *No need to register* (12/12)
- *Link to other portals* (10/12)

## Geoportal

Scores well on:

- Q14 services (11/11)
- Contact possible (10/11)
- Moving between pages (8/11)
- User friendly search function (11/11)
- *Standard metadata* (7/11)

# Striking in 2016

## Open data portal

- No (free) viewing for all data (5/12)
- Dead links 4/12
- But: statistics on dead links are also monitored, see <https://data.overheid.nl/statistiek/linkcheck>

## Geoportal

- No free viewing for all data (6/11)
- Dead links 5/11
- No download for all data (9/11)

# Remarkable findings geoportal

- Language:
  - Metadata in one 'home country' language
  - Searching in English possible, results in 'home country' language
- Jargon of spatial data
- Expert knowledge required to understand how to deal with the acquired files
- Free data but need to register
- Notification service for updates
- Functions on a mobile device, though the website is not adapted to screen size.

# Remarkable findings open data portal

- Linking to the source for required information: depending on the source of the data finding a contact person varies from very easy to very difficult
- Rating datasets

# Reflection

- Students and student assignment...!
- (geo)portals seem to add value in terms of successfully acquiring geoinformation
- No reliable results

If developing a portal, please note

# A provider perspective

A screenshot of the Geonovum website. The header is blue with white navigation links: HOME, ACTUEEL, GEO-STANDAARDEN, DOSSIERS, DIENSTEN, and GEONOVUM. The main content area has a white background. It features a breadcrumb trail 'Home /' followed by a large green headline: 'NATIONAAL GEOREGISTER GENOMINEERD ALS BESTE ICT-PROJECT VAN HET JAAR BIJ DE OVERHEID'. Below this is the date '28 mei 2010' and a paragraph of text. To the right of the text is a small image of a globe with the word 'GEO' overlaid. At the bottom of the article is another paragraph of text.

## NATIONAAL GEOREGISTER GENOMINEERD ALS BESTE ICT-PROJECT VAN HET JAAR BIJ DE OVERHEID

28 mei 2010

Het nationaal georegister heeft een nominatie te pakken. Deze nominatie voor 'beste ICT-project van het jaar bij de overheid' is gebaseerd op suggesties van de lezers van het weekblad Computable en bezoekers van de website. Naast het nationaal georegister zijn nog vier andere projecten genomineerd in deze categorie. Wie uiteindelijk op 7 oktober 2010 met de award naar huis zal gaan, bepalen de lezers van computable.nl.

Het project 'nationaal georegister' valt sinds 1 oktober 2010 onder het programma 'Publieke Dienstverlening op de Kaart'. Het nationaal georegister zelf wordt mogelijk gemaakt door de aanbieders van geo-informatie in Nederland. Dit zijn alle Nederlandse overheden, verschillende onderzoeksinstituten en bedrijven. In het nationaal

# A user perspective

een oproep vanuit de Open Data wereld: "ArcGis World en Nationaal GeoRegister" [..]

"ArcGis World en Nationaal GeoRegister

In het kader van doorlopend onderzoek ben ik eens aan het klussen geslagen met de (open) datasets op Nationaal Georegister (<http://www.nationaalgeoregister.nl/geonetwork/srv/nl/main.home>) en ArcGis World (<http://www.arcgis.com/home/>).

**"This website is not suitable at all for users to find any data. Even experienced users, like myself, remain puzzled about the offered content"**

ten eerste krijg ik continue andere toelichtingen, of andere manieren waarna verder kunnen onmogelijk is. Zelfs het me foutloos te zoeken, dan is er geen wegwijs te worden uit de aangeboden data. Als ik uit puur ongeduld maar wat datasets selecteer kan ik niets downloaden of als service benaderen. Kortom, de site is onbruikbaar binnen een Open Data strategie.

Overigens wil ik daarmee het initiatief van het Nationaal GeoRegister niet opzij zetten. Het is een belangrijk initiatief, dat marktpartijen en particulieren kan stimuleren allerlei kaarten en apps te ontwikkelen via oplossingen zoals ArcGis World.

Wel zou ik GeoNovum willen aanraden contact op te nemen met Paul SuijkerBuijk als mr. OpenData binnen de ICTU voor opname van de datasets binnen de op voeten staande OpenData catalogus Nederland. De presentatie en vindbaarheid van data zal daarmee sterk verbeteren. [...]

# INSPIRE GEOPORTAL

Enhancing access to European spatial data

EUROPEAN COMMISSION > INSPIRE > INSPIRE GEOPORTAL

What's new

## Welcome to the INSPIRE geoportal

The INSPIRE Directive requires the Commission to establish a community geo-portal and the Member States shall provide access to their infrastructures through the geo-portal as well as through any access points they themselves decide to operate.

Field	Value
-------	-------

# Wrap up

- national geoportals added value for users if data published in the portal (& some data only published in a portal)
- Performance national geoportals and open data portals comparable
- Test the performance of your portal frequently:
  - Fix the links!
  - Involve users
- Users?
  - Who are the envisioned users of the portal?
  - User friendliness?
  - Multilingual portal?

- Visit [www.sdiassessment.org](http://www.sdiassessment.org) for the status of geoportals worldwide

# Open data portals as part of the open data ecosystem: lessons learned from geoportal research
