

Kylin ODBC Driver Tutorial

“

We provide Kylin ODBC driver to enable data access from ODBC-compatible client applications.

Both 32-bit version or 64-bit version driver are available.

Tested Operation System: Windows 7, Windows Server 2008 R2

Tested Application: Tableau 8.0.4 and Tableau 8.1.3

Prerequisites

1. Microsoft Visual C++ 2012 Redistributable
 - For 32 bit Windows or 32 bit Tableau Desktop: Download: [32bit version](#)
 - For 64 bit Windows or 64 bit Tableau Desktop: Download: [64bit version](#)
2. ODBC driver internally gets results from a REST server, make sure you have access to one

Installation

1. Uninstall existing Kylin ODBC first, if you already installed it before
2. Download the attached driver installer at [KylinOLAP/odbc-driver/exe](#), run it.
 - For 32 bit Tableau Desktop: Please install KylinODBCDriver (x86).exe
 - For 64 bit Tableau Desktop: Please install KylinODBCDriver (x64).exe
3. Both drivers already be installed on Tableau Server, you properly should be able to publish to there without issues
