Class Index

1.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

XscBindingSlot	
Binding slot of textures, constant buffers, and fragment targets	3
XscFormatting	
Formatting descriptor structure for the output shader	3
XscIncludeHandler	
Include handler structure	4
XscLog	
Output log structure	5
XscNameMangling	
Name mangling descriptor structure for shader input/output variables (also referred to as "vary- ings"), temporary variables, and reserved keywords	5
XscNumThreads	
Number of threads within each work group of a compute shader	7
XscOptions	
Structure for additional translation options	7
XscReflectionData	
Structure for shader output statistics (e.g. texture/buffer binding points)	9
XscReport	
Report structure for warning and error messages	10
XscSamplerState	
Static sampler state descriptor structure (D3D11_SAMPLER_DESC)	10
XscShaderInput	
Shader input descriptor structure	11
XscShaderOutput	
Shader output descriptor structure	12
XscVertexSemantic	
Vertex shader semantic (or rather attribute) layout structure	13

Chapter 2

Class Documentation

2.1 XscBindingSlot Struct Reference

Binding slot of textures, constant buffers, and fragment targets.

```
#include <ReflectionC.h>
```

Public Attributes

- const char * [ident](#)
Identifier of the binding point.
- int [location](#)
Zero based binding point or location. If this is -1, the location has not been set explicitly.

2.1.1 Detailed Description

Binding slot of textures, constant buffers, and fragment targets.

The documentation for this struct was generated from the following file:

- ReflectionC.h

2.2 XscFormatting Struct Reference

Formatting descriptor structure for the output shader.

```
#include <XscC.h>
```

Public Attributes

- const char * [indent](#)
Indentation string for code generation. By default 4 spaces.
- bool [blanks](#)
If true, blank lines are allowed. By default true.
- bool [lineMarks](#)
If true, line marks are allowed. By default false.
- bool [compactWrappers](#)
If true, wrapper functions for special intrinsics are written in a compact formatting (i.e. all in one line). By default false.
- bool [alwaysBracedScopes](#)
If true, scopes are always written in braces. By default false.
- bool [newLineOpenScope](#)
If true, the '{'-braces for an open scope gets its own line. If false, braces are written like in Java coding conventions. By default true.
- bool [lineSeparation](#)
If true, auto-formatting of line separation is allowed. By default true.

2.2.1 Detailed Description

Formatting descriptor structure for the output shader.

The documentation for this struct was generated from the following file:

- XscC.h

2.3 XscIncludeHandler Struct Reference

Include handler structure.

```
#include <IncludeHandlerC.h>
```

Public Attributes

- XSC_PFN_HANDLE_INCLUDE [handleIncludePfn](#)
Function pointer to handle the '#include'-directives.
- const char ** [searchPaths](#)
Pointer to an array of search paths. This must be either NULL, point to an array where the last entry is always NULL.

2.3.1 Detailed Description

Include handler structure.

The documentation for this struct was generated from the following file:

- IncludeHandlerC.h

2.4 XscLog Struct Reference

Output log structure.

```
#include <LogC.h>
```

Public Attributes

- `XSC_PFN_HANDLE_REPORT` [handleReportPfn](#)
Function pointer to handle compiler reports.

2.4.1 Detailed Description

Output log structure.

The documentation for this struct was generated from the following file:

- LogC.h

2.5 XscNameMangling Struct Reference

Name mangling descriptor structure for shader input/output variables (also referred to as "varyings"), temporary variables, and reserved keywords.

```
#include <XscC.h>
```

Public Attributes

- `const char *` [inputPrefix](#)
Name mangling prefix for shader input variables. By default "xsv_".
- `const char *` [outputPrefix](#)
Name mangling prefix for shader output variables. By default "xsv_".
- `const char *` [reservedWordPrefix](#)
Name mangling prefix for reserved words (such as "texture", "main", "sin" etc.). By default "xsr_".
- `const char *` [temporaryPrefix](#)
Name mangling prefix for temporary variables. By default "xst_".
- `const char *` [namespacePrefix](#)
Name mangling prefix for namespaces like structures or classes. By default "xsn_".
- `bool` [useAlwaysSemantics](#)
- `bool` [renameBufferFields](#)
If true, the data fields of a 'buffer'-objects is renamed rather than the outer identifier. By default false.

2.5.1 Detailed Description

Name mangling descriptor structure for shader input/output variables (also referred to as "varyings"), temporary variables, and reserved keywords.

2.5.2 Member Data Documentation

2.5.2.1 `const char* XscNameMangling::inputPrefix`

Name mangling prefix for shader input variables. By default "xsv_".

Remarks

This can also be empty or equal to "outputPrefix".

2.5.2.2 `const char* XscNameMangling::namespacePrefix`

Name mangling prefix for namespaces like structures or classes. By default "xsn_".

Remarks

This can also be empty, but if it's not empty it must not be equal to any of the other prefixes.

2.5.2.3 `const char* XscNameMangling::outputPrefix`

Name mangling prefix for shader output variables. By default "xsv_".

Remarks

This can also be empty or equal to "inputPrefix".

2.5.2.4 `bool XscNameMangling::renameBufferFields`

If true, the data fields of a 'buffer'-objects is renamed rather than the outer identifier. By default false.

Remarks

This can be useful for external diagnostic tools, to access the original identifier.

2.5.2.5 `const char* XscNameMangling::reservedWordPrefix`

Name mangling prefix for reserved words (such as "texture", "main", "sin" etc.). By default "xsr_".

Remarks

This must not be equal to any of the other prefixes and it must not be empty.

2.5.2.6 `const char*` XscNameMangling::temporaryPrefix

Name mangling prefix for temporary variables. By default "xst_".

Remarks

This must not be equal to any of the other prefixes and it must not be empty.

2.5.2.7 `bool` XscNameMangling::useAlwaysSemantics

If true, shader input/output variables are always renamed to their semantics, even for vertex input and fragment output. Otherwise, their original identifiers are used. By default false.

The documentation for this struct was generated from the following file:

- XscC.h

2.6 XscNumThreads Struct Reference

Number of threads within each work group of a compute shader.

```
#include <ReflectionC.h>
```

Public Attributes

- `int` **x**
- `int` **y**
- `int` **z**

2.6.1 Detailed Description

Number of threads within each work group of a compute shader.

The documentation for this struct was generated from the following file:

- ReflectionC.h

2.7 XscOptions Struct Reference

Structure for additional translation options.

```
#include <XscC.h>
```

Public Attributes

- bool [optimize](#)
If true, little code optimizations are performed. By default false.
- bool [preprocessOnly](#)
If true, only the preprocessed source code will be written out. By default false.
- bool [validateOnly](#)
If true, the source code is only validated, but no output code will be generated. By default false.
- bool [allowExtensions](#)
If true, the shader output may contain GLSL extensions, if the target shader version is too low. By default false.
- bool [explicitBinding](#)
If true, explicit binding slots are enabled. By default false.
- bool [autoBinding](#)
If true, binding slots for all buffer types will be generated sequentially, starting with index at 'autoBindingStartSlot'. By default false.
- int [autoBindingStartSlot](#)
Index to start generating binding slots from. Only relevant if 'autoBinding' is enabled. By default 0.
- bool [preserveComments](#)
If true, commentaries are preserved for each statement. By default false.
- bool [preferWrappers](#)
If true, intrinsics are preferred to be implemented as wrappers (instead of inlining). By default false.
- bool [unrollArrayInitializers](#)
If true, array initializations will be unrolled. By default false.
- bool [rowMajorAlignment](#)
If true, matrices have row-major alignment. Otherwise the matrices have column-major alignment. By default false.
- bool [separateShaders](#)
If true, generated GLSL code will support the 'ARB_separate_shader_objects' extension. By default false.
- bool [obfuscate](#)
If true, code obfuscation is performed. By default false.
- bool [showAST](#)
If true, the AST (Abstract Syntax Tree) will be written to the log output. By default false.
- bool [showTimes](#)
If true, the timings of the different compilation processes are written to the log output. By default false.

2.7.1 Detailed Description

Structure for additional translation options.

2.7.2 Member Data Documentation

2.7.2.1 bool XscOptions::autoBinding

If true, binding slots for all buffer types will be generated sequentially, starting with index at 'autoBindingStartSlot'. By default false.

Remarks

This will also enable 'explicitBinding'.

The documentation for this struct was generated from the following file:

- XscC.h

2.8 XscReflectionData Struct Reference

Structure for shader output statistics (e.g. texture/buffer binding points).

```
#include <ReflectionC.h>
```

Public Attributes

- const char ** [macros](#)
All defined macros after pre-processing.
- size_t [macrosCount](#)
Number of elements in 'macros'.
- const struct [XscBindingSlot](#) * [textures](#)
Texture bindings.
- size_t [texturesCount](#)
Number of elements in 'textures'.
- const struct [XscBindingSlot](#) * [storageBuffers](#)
Storage buffer bindings.
- size_t [storageBuffersCount](#)
Number of elements in 'storageBuffers'.
- const struct [XscBindingSlot](#) * [constantBuffers](#)
Constant buffer bindings.
- size_t [constantBufferCounts](#)
Number of elements in 'constantBuffers'.
- const struct [XscBindingSlot](#) * [inputAttributes](#)
Shader input attributes.
- size_t [inputAttributesCount](#)
Number of elements in 'inputAttributes'.
- const struct [XscBindingSlot](#) * [outputAttributes](#)
Shader output attributes.
- size_t [outputAttributesCount](#)
Number of elements in 'outputAttributes'.
- const struct [XscSamplerState](#) * [samplerStates](#)
Static sampler states (identifier, states).
- size_t [samplerStatesCount](#)
Number of elements in 'samplerStates'.
- struct [XscNumThreads](#) [numThreads](#)
'numthreads' attribute of a compute shader.

2.8.1 Detailed Description

Structure for shader output statistics (e.g. texture/buffer binding points).

The documentation for this struct was generated from the following file:

- [ReflectionC.h](#)

2.9 XscReport Struct Reference

Report structure for warning and error messages.

```
#include <ReportC.h>
```

Public Attributes

- enum XscReportType **type**
Specifies the report type.
- const char * **context**
Specifies the context description string (e.g. a function name where the report occurred). This may also be NULL.
- const char * **message**
Specifies the message string.
- const char * **line**
Specifies the line string where the report occurred. This line never has new-line characters at its end. This may also be NULL.
- const char * **marker**
Specifies the line marker string to highlight the area where the report occurred. This may also be NULL.
- const char ** **hints**
Specifies the list of optional hints of the report. This may also be NULL.
- size_t **hintsCount**
Specifies the number of hints. If 'hints' is NULL, this is 0.

2.9.1 Detailed Description

Report structure for warning and error messages.

The documentation for this struct was generated from the following file:

- ReportC.h

2.10 XscSamplerState Struct Reference

Static sampler state descriptor structure (D3D11_SAMPLER_DESC).

```
#include <ReflectionC.h>
```

Public Attributes

- const char * **ident**
- enum XscFilter **filter**
- enum XscTextureAddressMode **addressU**
- enum XscTextureAddressMode **addressV**
- enum XscTextureAddressMode **addressW**
- float **mipLODBias**
- unsigned int **maxAnisotropy**
- enum XscComparisonFunc **comparisonFunc**
- float **borderColor** [4]
- float **minLOD**
- float **maxLOD**

2.10.1 Detailed Description

Static sampler state descriptor structure (D3D11_SAMPLER_DESC).

Remarks

All members and enumerations have the same values like the one in the "D3D11_SAMPLER_DESC" structure respectively. Thus, they can all be statically casted from and to the original D3D11 values.

The documentation for this struct was generated from the following file:

- ReflectionC.h

2.11 XscShaderInput Struct Reference

Shader input descriptor structure.

```
#include <XscC.h>
```

Public Attributes

- const char * [filename](#)
Specifies the filename of the input shader code. This is an optional attribute, and only a hint to the compiler. By default NULL.
- const char * [sourceCode](#)
Specifies the input source code. This must not be null when passed to the "XscCompileShader" function!
- enum XscInputShaderVersion [shaderVersion](#)
Specifies the input shader version (e.g. XscEInputHLSL5 for "HLSL 5"). By default XscEInputHLSL5.
- enum XscShaderTarget [shaderTarget](#)
Specifies the target shader (Vertex, Fragment etc.). By default XscUndefinedShader.
- const char * [entryPoint](#)
Specifies the HLSL shader entry point. By default "main".
- const char * [secondaryEntryPoint](#)
Specifies the secondary HLSL shader entry point. By default NULL.
- unsigned int [warnings](#)
Compiler warning flags. This can be a bitwise OR combination of the "XscWarnings" enumeration entries. By default 0.
- struct [XscIncludeHandler](#) [includeHandler](#)
Include handler member which contains a function pointer to handle '#include'-directives.

2.11.1 Detailed Description

Shader input descriptor structure.

2.11.2 Member Data Documentation

2.11.2.1 `const char* XscShaderInput::secondaryEntryPoint`

Specifies the secondary HLSL shader entry point. By default NULL.

Remarks

This is only used for a Tessellation-Control Shader (alias Hull Shader) entry point, when a Tessellation-
Control Shader (alias Domain Shader) is the output target. This is required to translate all Tessellation-Control attributes (i.e. "partitioning" and "outputtopology") to the Tessellation-Evaluation output shader. If this is empty, the default values for these attributes are used.

2.11.2.2 `unsigned int XscShaderInput::warnings`

Compiler warning flags. This can be a bitwise OR combination of the "XscWarnings" enumeration entries. By default 0.

See also

Warnings

The documentation for this struct was generated from the following file:

- XscC.h

2.12 XscShaderOutput Struct Reference

Shader output descriptor structure.

```
#include <XscC.h>
```

Public Attributes

- `const char * filename`
Specifies the filename of the output shader code. This is an optional attribute, and only a hint to the compiler.
- `const char ** sourceCode`
Specifies the output source code. This will contain the output code. This must not be null when passed to the "XscCompileShader" function!
- `enum XscOutputShaderVersion shaderVersion`
Specifies the output shader version. By default XscEOutputGLSL (to auto-detect minimum required version).
- `const struct XscVertexSemantic * vertexSemantics`
Optional list of vertex semantic layouts, to bind a vertex attribute (semantic name) to a location index (only used when 'explicitBinding' is true). By default NULL.
- `size_t vertexSemanticsCount`
Number of elements the 'vertexSemantics' member points to. By default 0.
- `struct XscOptions options`
Additional options to configure the code generation.
- `struct XscFormatting formatting`
Output code formatting descriptor.
- `struct XscNameMangling nameMangling`
Specifies the options for name mangling.

2.12.1 Detailed Description

Shader output descriptor structure.

The documentation for this struct was generated from the following file:

- XscC.h

2.13 XscVertexSemantic Struct Reference

Vertex shader semantic (or rather attribute) layout structure.

```
#include <XscC.h>
```

Public Attributes

- const char * [semantic](#)
Specifies the shader semantic (or rather attribute).
- int [location](#)
Specifies the binding location.

2.13.1 Detailed Description

Vertex shader semantic (or rather attribute) layout structure.

The documentation for this struct was generated from the following file:

- XscC.h
