

## Qlikview Components Release Notes

### Changes for V6

1. New SUB Qvc.DbExtract provides for table driven extract from SQL to QVD of multiple tables. A parameter table contains one row for each table to be extracted. Both Full and Delta load are supported.
2. Qvc.Calendar. [Issue 26](#). Additional Set variables have been created that represents the modifier portion of the Set expression. This allows for additions to the expression. The new variables are named vSetXxxModifier.

- a. Using the classic VSetXxx variable:

```
Sum($ (vSetYTD) Sales) // YTD Sales
```

- b. The vSetXxxModifier represents the modifier arguments. Note that you must add the "{< >}" syntax of the set.

```
Sum({< $ (vSetYTDModifier), Region={US}>} Sales) // YTD Sales, US  
only
```

3. [Issue 29](#). Qvc.PopulateVariables. Add [] around variable names to allow for special characters and spaces.
4. [Issue 28](#). Qvc.ListFiles. Default filemask missing.
5. [Issue 27](#). Qvc.LogWarning. Documentation correction.
6. [Issue 25](#). Qvc.AvailableUpdate. Documentation correction
