

# Present A.I

Present A.I “sees” you and analyzes your face expressions in real time and gives you score using the “Zero Rating System”

(c) Present A.I Authors 2017

# Features

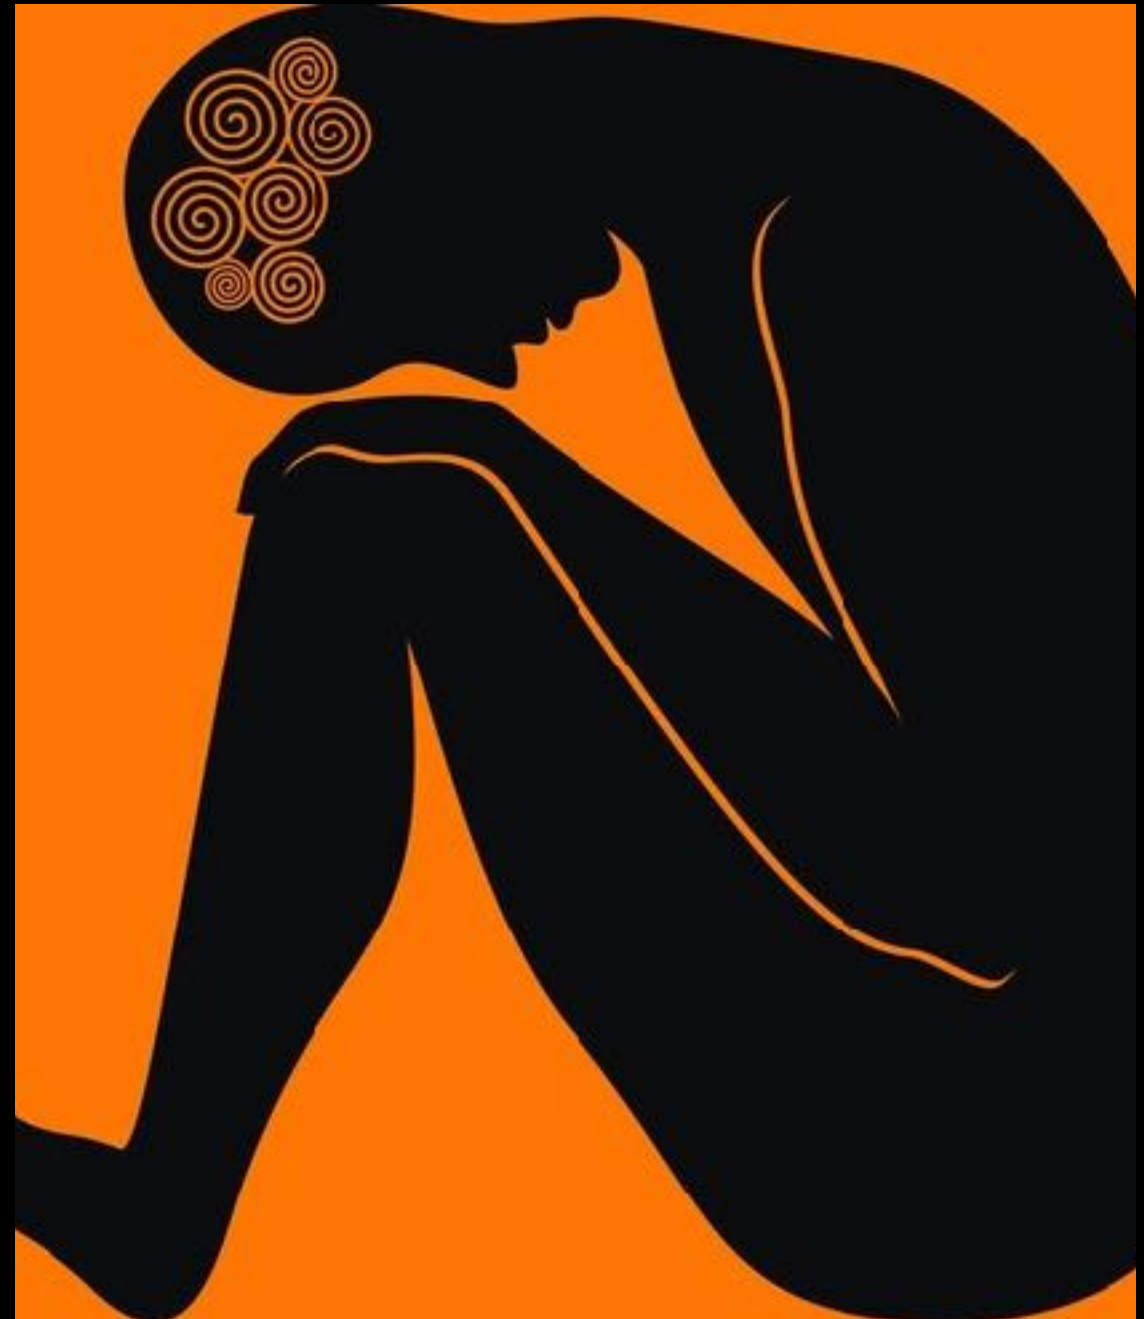

- Unique Interface
- User Friendly
- Built using the state of art algorithms
- Built using Mental illness in mind.

# Why Present A.I?

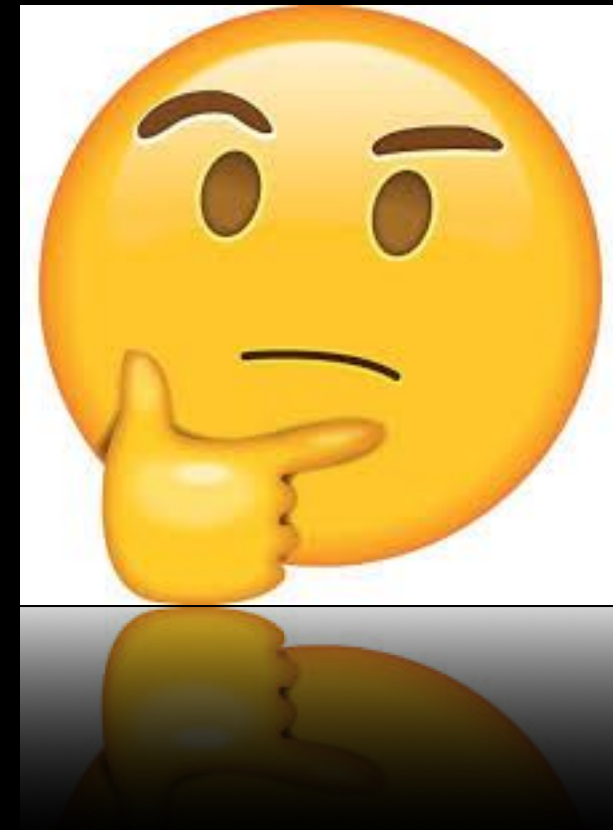

Sometimes we feel sad, sometime we feel angry, sometimes we feel happy. Study has shown that many times we are not actually ill, we are just having a bad time.

Present A.I solves this problem by analyzing your face expressions. It makes you speak in front of it and then simultaneously analyzes your face expressions to give a score.

# Working

Present A.I works using machine learning models specifically built for mental health recovery. The main “magic” lies in the rating system that gives a score. Based on the rank the system prescribes you things like Yoga, Meditation, Running etc.

# Zero One Rating System

- Zero one rating system rates the frequencies of expressions in the form of zeroes and one. It first assigns each expression as 0 or 1 (but in equal number). Then it multiplies them by a MF(Multiplying factor ex: 0.01), then adds and multiplies the result by 100.

**Thanks for your time :)**

**There is no reason and no way that a human mind can  
keep up with an artificial intelligence machine by  
2035.**
