

pandoc-asciiart-filter

pandoc2 filter that converts embedded asciiart to nicely rendered graphics

filters codeblocks annotated with `ditaa` or `plantuml`, shells out to render those codeblocks (jdk1.8+ needed), caches images in `rendered/` subdir, re-renders them only on change (significant speedup)

prerequisites

- pandoc 2+
- jdk1.8+

installation

`make`

loads all needed libraries and puts them in the `lib/` folder.

usage

```
pandoc \  
  README.md \  
  --lua-filter render-asciiart-filter.lua \  
  -o README.pdf
```

example

the following codeblocks should be rendered as graphics, inspect the generated pdf.
