

Calcurates Module Installation Guide

for Magento 2.x

Calcurates module for Magento 2 — Installation Guide

Composer Installation

1. Enable Maintenance mod

This step is optional if your website is in developer mode

```
php bin/magento maintenance:enable
```

2. Run the following commands from your root Magento installation directory

```
composer require calcurates/module-magento
```

```
php bin/magento module:enable --clear-static-content  
Calcurates_ModuleMagento
```

```
php bin/magento cache:flush
```

```
php bin/magento setup:upgrade
```

This step is optional if your website is in developer mode

```
php bin/magento setup:di:compile
```

This step is optional if your website is in developer mode

```
php bin/magento setup:static-content:deploy
```

3. Disable Maintenance mode

This step is optional if your website is in developer mode

```
php bin/magento maintenance:disable
```

4. Now that you have Calcurates installed you can begin configuring your extension.

Manual Installation

Warning

We recommend to use Composer Installation above as per Magento 2 standards.

1. Download the latest release: <https://github.com/calcurates/module-magento/releases/latest>
2. Create the path `app/code/Calcurates/ModuleMagento` in the root of your Magento directory.
3. Extract the contents of the .zip archive to the `ModuleMagento` folder. This will merge into the `app` directory. This is a **raw** install so any test files/directories **must be removed** if present.
4. Enable the modules using:

```
php bin/magento module:enable Calcurates_ModuleMagento
```

5. Update Magento with:

```
php bin/magento setup:upgrade
```

6. Clear cache and re-compile
7. Now that you have Calcurates installed you can begin configuring your extension.
