Examples for Default New Tab Pages

- your homepage note
- your daily note
- a scratchpad note
- trigger a quick switcher
- an image
- a random quote
- ...

Usage

1. Set the note to open in new tabs in the plugin settings.
2. Set the mode in which the note should open.
3. Open a new tab.

Note Closing your last tab also opens your new tab page.

Advanced Examples

Random Quote

To have a random quote on every new tab, you can use dataview and paste the following code as a dataviewjs-codeblock in a note.

```
const quote = JSON.parse(await request("https://api.quotable.io/random"))
dv.span(`> "${quote.content}" \n> <div style="text-align: end; color: var`
```

Then, enter the path of the note in the *New Tab Default Page* settings, and select *Reading Mode*. Now every new note will display a random quote.

Submit your own idea

Have a cool idea of your own? Feel free to make a PR to this README and submit your own idea.

Installation

Available in Obsidian's Community Plugin Browser via: Settings → Community Plugins → Browse → Search for “*New Tab Default Page*”
