

File Edit Refactor Navigate Search Run Project Window Help

Project Explorer knnquery.cc Out

```
/*
 * Non-metric Space Library
 *
 * Authors: Bilegsaikhan Naidan (https://github.com/bileg), Leonid Boytsov (http://boytsov.info).
 */

```

**Preferences**

Indexer

Select indexer: Fast C/C++ Indexer (recommended)

Index all files (files neither built nor included, also)

Skip all references (Call Hierarchy and Search will not work)

Skip type references (Search for type references will not work)

Files to index up-front: stdarg.h, stddef.h, sys/types.h

Indexing strategy

Automatically update the index

Update index immediately after every file-change

Build configuration for the indexer

Use active build configuration

Use the build configuration specified in the project's indexer settings

Cache limits

Index database cache:

Limit relative to the maximum heap size: 10 %

Absolute Limit: 64 MB

Header file cache (used by full indexer and refactoring):

Absolute Limit: 64 MB

Restore Defaults Apply OK Cancel

Could not find symbol 'KNNQuery' in index Writable Smart Insert 33 : 9

File Explorer: Non-Metric-Space-Library
