

Development Tools

Blockchain

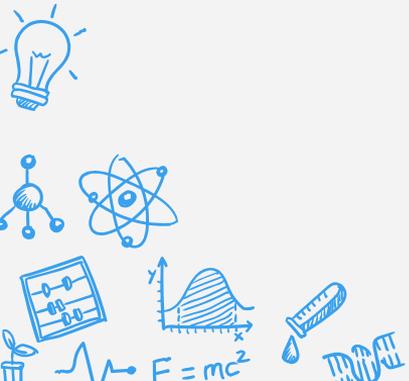

Derek

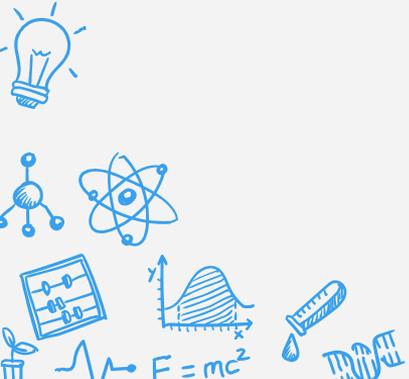

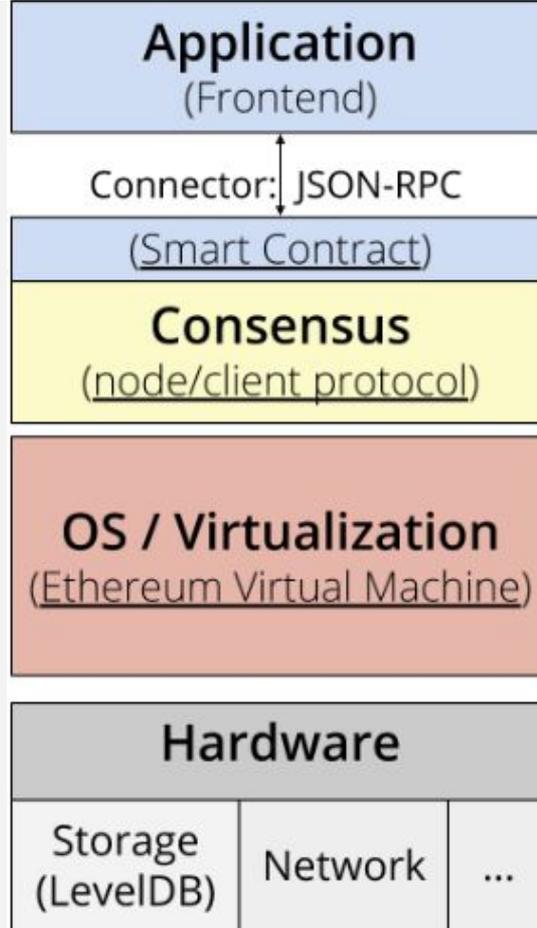

BLOCKCHAIN
AT NTU

Today's format

- ❑ Software Stack (Blockchain vs Traditional)

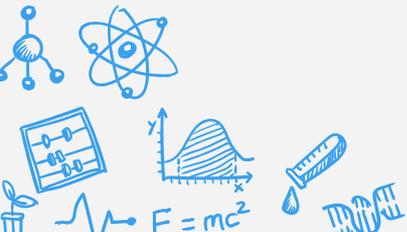

Software Stack

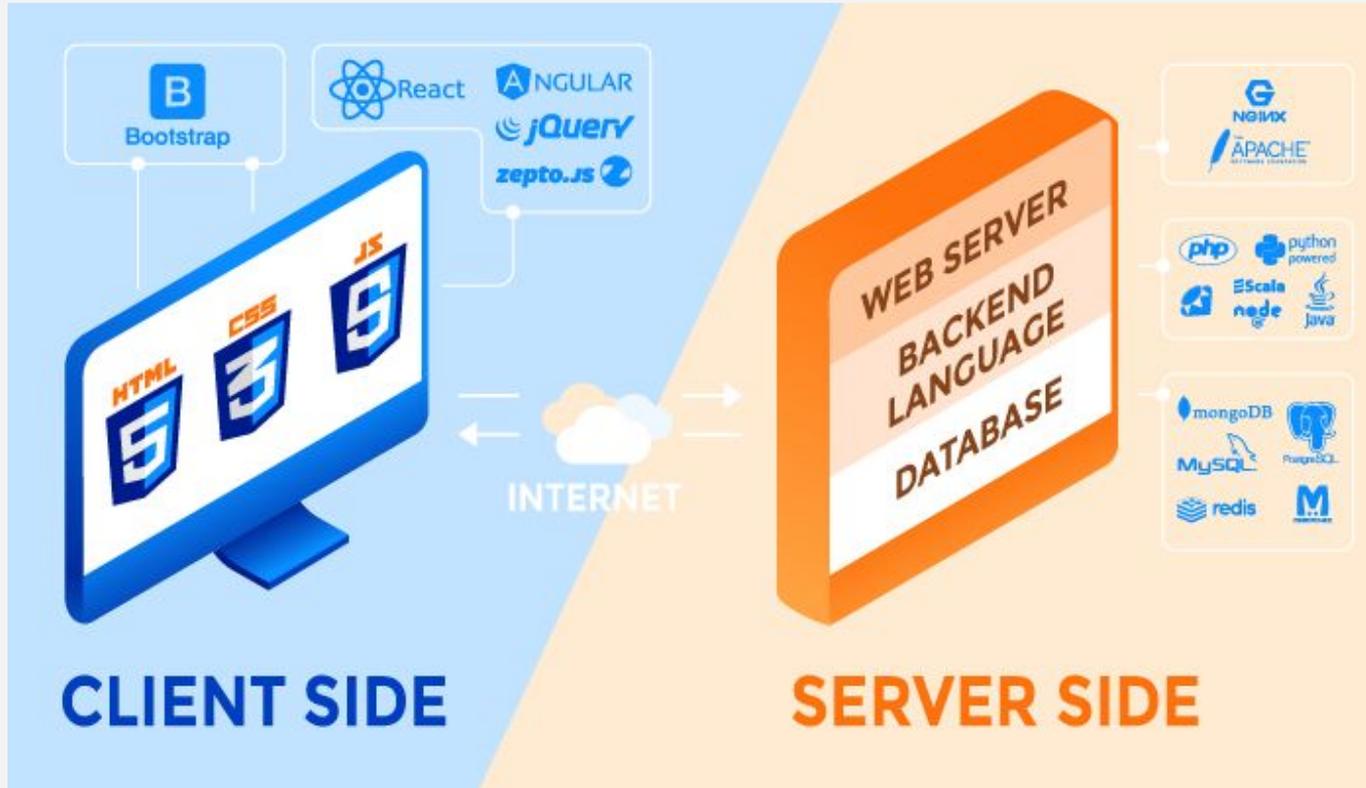

Software Stack

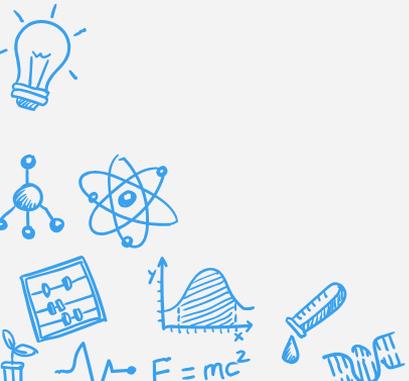

- Group of programs that work together to achieve a common goal 
 - ↳ Requires understanding of what the goal is first
- Who is it for?
- What platform are you using?
- How often do you want the system to be up?
- How many people do you foresee using the system?
- etc...

Software Stack

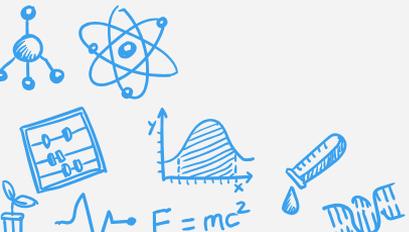

Application Interface

Web Applications

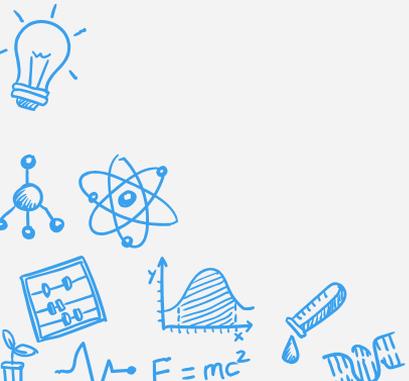

- ❑ HTML - Hypertext Markdown Language
 - ↳ Basic structure (skeleton) of webpage
- ❑ Javascript
 - ↳ Front-end logic, executes within browser
- ❑ CSS - Cascading Style Scripts
 - ↳ Beautifies the web-page
- ❑ PHP
 - ↳ Server-side logic

1. React.js

□ Tutorial:

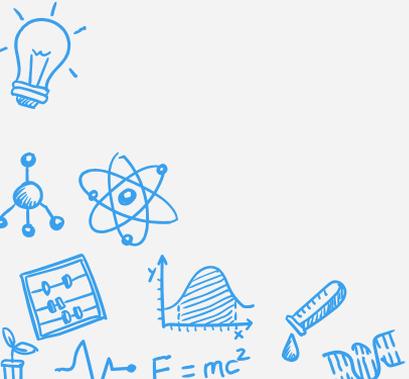

↳ <http://bit.ly/bnsWebReact>

2. Bootstrap

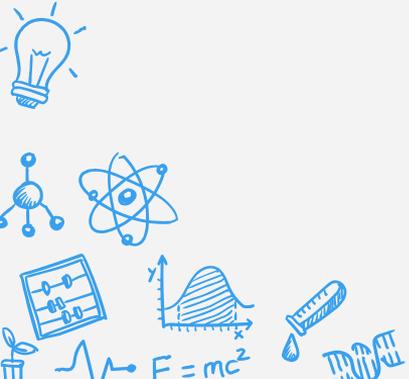

□ Tutorial:

↳ <http://bit.ly/bnsWebBootstrap>

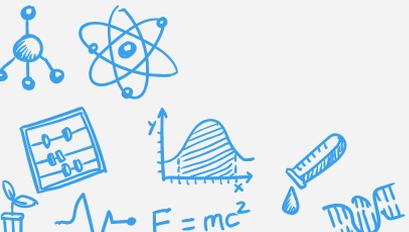

Communication

JSON / XML

Communication

- ❑ Communication is done through API (Application Platform Interface)
- ❑ Interfaces interact by sending packets of data (usually in JSON or XML format)
- ❑ Blockchain : Web3, JSON RPC

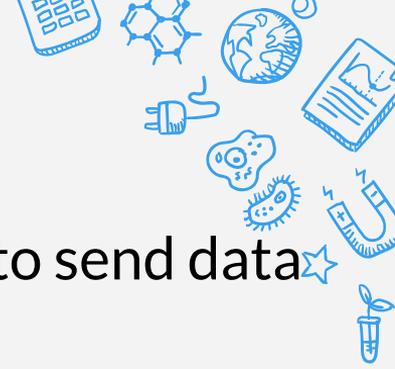

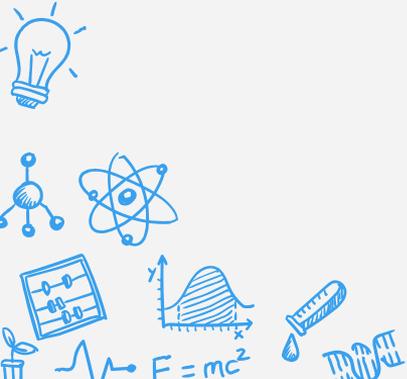

JSON

- ❑ JSON (Javascript Object Notation) is a common way to send data between different components

↳ to access: `myObjc.age`

```
var myObj = {name: "John", age: 31, city: "New York"};
```

XML

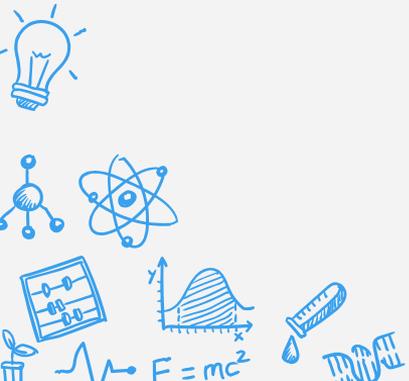

- ❑ XML (Extensible Markup Language) is another way to communicate
- ❑ Most notable difference: no arrays in XML

```
<?xml version="1.0"?>
<quiz>
  <qanda seq="1">
    <question>
      Who was the forty-second
      president of the U.S.A.?
    </question>
    <answer>
      William Jefferson Clinton
    </answer>
  </qanda>
  <!-- Note: We need to add
  more questions later.-->
</quiz>
```

XML

Backend

Python Flask

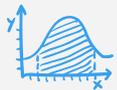

2. Python Flask

❑ To install:

- ↳ Python (3)
- ↳ Git
- ↳ Heroku
- ↳ Postman

❑ Tutorial:

- ↳ <http://bit.ly/bnsWebFlask>
