

[1, 8, 6, 2, 5, 4, 8, 3, 7]

$$\text{area} = \min(h_{\text{left}}, h_{\text{right}}) \cdot (\text{right} - \text{left})$$

To maximize area, we need maximize ① and ②

① start from the greatest of right - left

② $\min(h_{\text{left}}, h_{\text{right}})$.

This part takes minimum of left and right.

So it only takes effect if we move smaller one.
