1. Introduction

This manual will guide you on how to setup and configure Sezzle Pay Magento 2 extension in your store.

2. Installation

Sign up for Sezzle by logging into the url - <https://dashboard.sezzle.com/merchant/signup/> and get your Merchant Id & API keys saved.

2.1 Automatic Installation

Install the extension by logging into the server and traversing to Magento root path. Execute the below command to get it installed via composer.

```
composer require sezzle/sezzlepay  
php bin/magento setup:upgrade  
php bin/magento setup:di:compile  
php bin/magento setup:static-content:deploy  
php bin/magento cache:clean
```

2.2 Manual Installation

1. Create folder called Sezzle under Magento 2 Root->app->code.
2. Inside Sezzle, create folder called Sezzlepay.
3. Inside it, extract the files from this repo.
4. SSH into the server and go to Magento 2 Root path.
5. Execute the below commands.

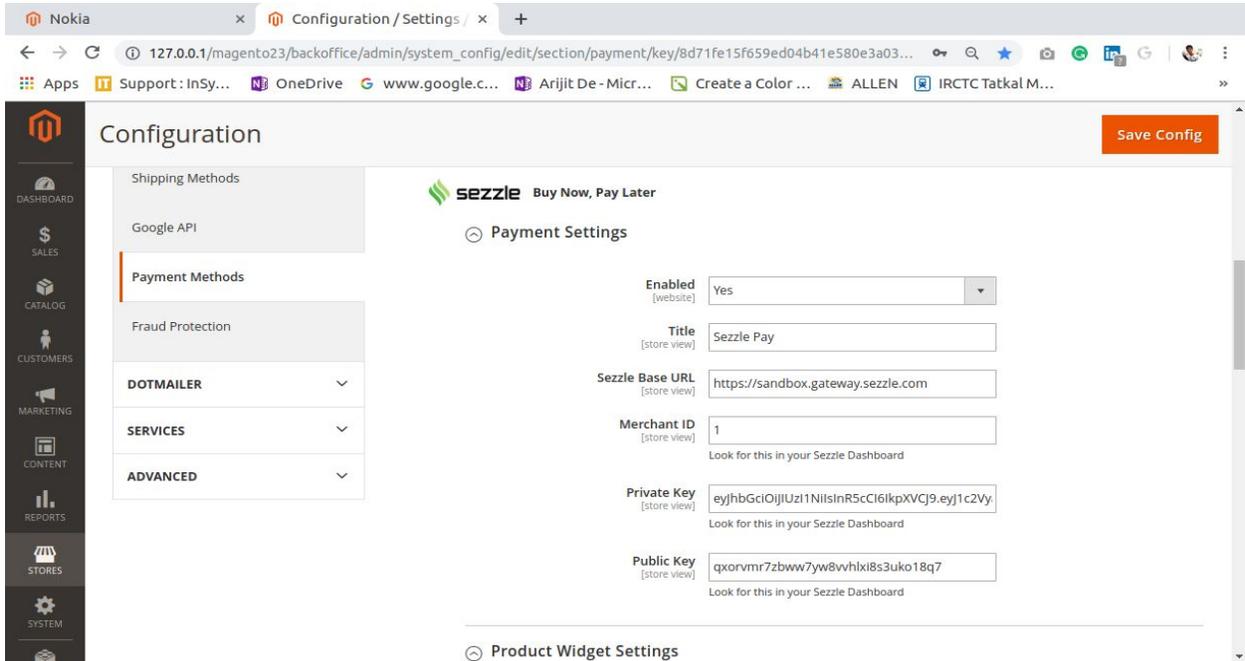

```
php bin/magento setup:upgrade
php bin/magento setup:di:compile
php bin/magento setup:static-content:deploy
php bin/magento cache:clean
```

3. Backend Setup

3.1 Payment Setup

1. Make sure you have the merchant ID and the API Keys from the Sezzle Merchant Dashboard.
2. Log into your store admin and navigate to Stores/Configuration/Sales/Payment Methods/Sezzle Pay/Payment Settings in your Magento admin.
3. Set the base URL to <https://gateway.sezzle.com> for LIVE action and sandbox, paste <https://sandbox.gateway.sezzle.com>.
4. Set the Merchant ID, Public Key and Private Key accordingly.
5. Save the configuration and clear the cache.

Follow the below image for your reference.

3.2 Product Widget Setup

1. Log into your store admin and navigate to Stores/Configuration/Sales/Payment Methods/Sezzle Pay/Product Widget Settings in your Magento admin.
2. Provide the below necessary information so that Sezzle widget comes up in the product page in frontend.
 - a. Price Block Selector : XPath of the price element.
 - b. Render to element path : Location where to render the widget.
 - c. Show in all countries : Provide as per your requirement.
 - d. Alignment : Position of the widget.
 - e. Theme : Widget theme that depends on your site's background.
 - f. Width type : Text width of the widget.
 - g. Image url : If you want to have different logo, paste the url here.
 - h. Hide classes : Classes to be hidden when sezzle widget is in place.
3. Save the configuration and clear the cache.

Check the below image for your reference.

The screenshot shows the Magento 2 Configuration interface. The left sidebar contains navigation options: DASHBOARD, SALES, CATALOG, CUSTOMERS, MARKETING, CONTENT, REPORTS, STORES, SYSTEM, and FIND PARTNERS & EXTENSIONS. The main content area is titled 'Configuration' and 'Product Widget Settings'. The configuration options are as follows:

- Price block selector** (website):

Path of the price element to watch for. For multiple, separate by |. Eg. `product-price/price|extra-info/price-min`
- Product page: render to element path** (website):

Path of the element to which to render widget. For multiple, separate by |. This path is relative to the corresponding price element. So, the first path in this will be relative to the first path in Price block selector. Second to the second and so on. Eg: If `product-price/price` is the path to the price element and you want to put the widget in the 2nd parent of that element, you should use `J.J.`
- Show in all countries** (website):

If false, the widget is shown only in countries where Sezzle Pay is supported
- Alignment** (website):

Alignment of the widget in the div
- Theme** (website):

Select the theme depending on your site's background
- Width Type** (website):

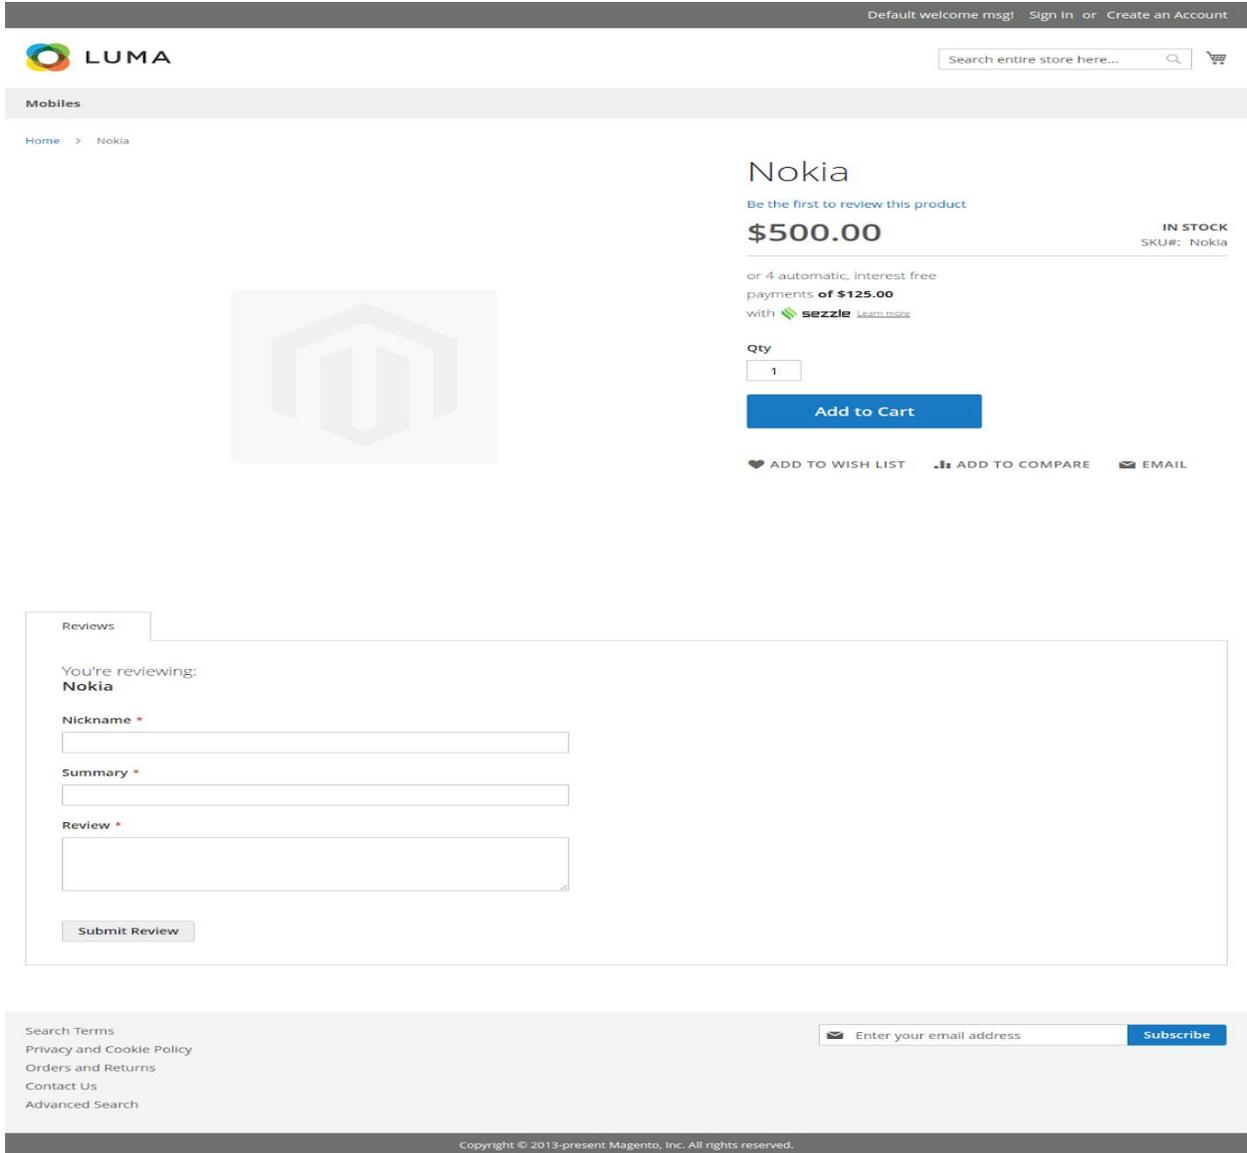

Text width of the widget
- Image URL** (website):

(Optional) Override with URL to a different Logo you want else leave empty
- Hide classes** (website):

Classes to be hidden when sezzle widget is visible. There are other products like Sezzle Pay which do not work in countries where sezzle works. You can hide them by adding their classes here. To hide multiple elements enter their classes like the following: Eg. `class-to-hide|class-to-hide-2`

4. Sezzle Product Widget

If you have configured the widget properly, you will be able to see a widget below the price element in product page in frontend. Referenced image has been pasted below.

5. Storefront Flow Diagram

Go to checkout by adding some products to your cart & you will be able to see the following view in your store.
